

## Top 10 Reasons to Choose Firebox<sup>®</sup> X Core™ e-Series

Growing businesses have the same critical network security needs as large enterprises, but generally have limited resources with which to buy, install, manage, and maintain their security solutions. To tackle these resource challenges, you need a solution that provides powerful protection, is easy to use, affordable, and capable of meeting your security needs not just today, but into the future. Here's why your Unified Threat Management (UTM) solution is the Firebox<sup>®</sup> X Core™.

### 1. Comprehensive Unified Threat Management

The Firebox X Core provides comprehensive security by integrating stateful packet firewall, VPN, deep application inspection, intrusion prevention, anti-virus, anti-spyware, anti-spam, and URL filtering into a single appliance – reducing the time and cost associated with managing multiple-point solutions and significantly increasing protection from blended network threats.

### 2. Zero Day Protection Out of the Box

Unlike products that rely solely on signature-based scanning, the Firebox X Core scrutinizes traffic as it comes into the network for anything that does not conform to standard protocols, behaviors, and patterns. It inspects traffic at multiple layers to proactively block fragmentation and DoS/DDoS attacks, viruses, worms, spyware, trojans, and blended threats, providing Zero Day protection from attacks during the window of vulnerability before signatures can be made available.

### 3. Advanced Appliance Software

Fireware is the appliance software that ships standard on the Firebox X Core. Upgrade to Fireware™ Pro, our advanced operating system, to add advanced networking features. Fireware<sup>®</sup> Pro provides dynamic routing, traffic management and prioritization, and high availability to intelligently manage resources, increase uptime, and optimize network traffic in demanding network environments.

### 4. Gateway AntiVirus/Intrusion Prevention Service

This is an integrated, signature-based security service that blocks known viruses, spyware, and other malware. It also provides in-line protection from attacks that carry malicious content for an additional layer of protection against application exploits including trojans, buffer overflows, SQL injections, and policy violations. In addition, you can block instant messaging and P2P applications. – two of the most common vehicles for spyware distribution. A single subscription provides network-wide protection for all users configured behind your Firebox X Core.

### 5. WebBlocker URL Filtering

WebBlocker enables you to centrally manage and configure where and when users access the Internet, drastically reducing exposure to spyware, trojans, virus downloads from rogue Web sites, and other malicious Web-based

mechanisms. Configure up to 40 Web site categories to stop the sites and Web tools you most want to block. This integrated service is sold per firewall. Other vendors charge per user, which can be much more expensive.

### 6. spamBlocker

This powerful, integrated spam blocking service relies on real-time detection for immediate protection from spam outbreaks. Spam is blocked regardless of the language, content, or format of the message. It's the best service in the industry at distinguishing legitimate communication from spam attacks in real time, blocking up to 97% of unwanted emails. spamBlocker is sold on a per appliance basis, so one subscription covers all users behind your Firebox X Core.

### 7. Easy-to-Use Management Console with No Hidden Costs

Every Firebox X Core can be easily configured and managed using WatchGuard<sup>®</sup> System Manager (WSM), an intuitive graphical user interface used to manage all capabilities of the Firebox X Core. It provides comprehensive logging, drag-and-drop VPN configuration, and real-time monitoring out the box, with no hidden costs or additional purchases. Because there's just one interface to learn in order to manage all aspects of your security solution, you'll save time as well as money.

### 8. Smart Defaults

Out of the box, Firebox X Core initiates default security settings that protect you from more attacks than other vendors. You don't have to be a security expert to be protected from day one.

### 9. One Solution, One License, One Great Price

The Firebox X Core UTM bundle makes it even easier to have a comprehensive Unified Threat Management solution. An exceptional value, each UTM bundle includes a Firebox X Core e-Series UTM appliance, plus one-year subscriptions to Gateway AntiVirus/Intrusion Prevention Service, spamBlocker, WebBlocker, and our award-winning LiveSecurity<sup>®</sup> Service.

### 10. Protecting Your Security Investment

WatchGuard makes it easy to add services and upgrades to keep your security solution tailored to current business requirements. Upgrade to a higher model in the line for more throughput and capacity with a downloadable license key. Add new capabilities to boost your organization's defenses in critical attack areas with our powerful suite of subscription-based security services. Move up to Fireware Pro advanced appliance software to meet the needs of more demanding networks. All of this is possible without buying any additional hardware. No other product on the market protects your security investment in so many ways.
